Product Notes

Notes:	The break out assembly is used to provide a safe, exit for fibre to equipment, at any point in either a 300, 220 or 100 mm ducting system. It is normally used to provide a break out in existing duct systems, and clips straight into a cut out provided by the cut out tool or made using the cut out jig. When used as described, it provides a 100 mm outlet; to which any standard 100 mm part can be fitted using either: the standard joiner or the slotless joiner which are available separately. It can also be used with vertical duct to feed patch cords down to a rack. (Used as an Trumpet Outlet).
